Growing of Fruit, for Home Use and the Market, Written With Special Reference to Colder Climates (Classic Reprint):

Horticulture in the School of Agriculture of the University of Minnesota I have not been able to find a book on fruit growing at all adapted to the wants of the students coming under my instruction. In fact, I soon found that the material along this line consisted principally of papers scattered through reports of the various horticultural societies and in the agricultural press, and that these were not generally available, nor, indeed, sufficiently condensed for my purpose. The peculiar conditions that obtain in this section of the country, and which render the works of Eastern authorities of little practical value here, made it desirable for me to have some practical book on fruit growing that the students could study and refer to at their convenience. A nother reason for presenting this book is that by so doing I might answer the many questions relating to the subject treated, which have been often referred to me, and which have required much time and attention in correspondence. The book is written for the beginner and is not offered as a complete manual of Horticulture, although it is believed to cover all the important points in practical fruit growing. But few varieties are recommended, and only the kinds that have been tried for some considerable period and can be obtained from the general nurserymen. Untried and little known kinds have been purposely avoided, however well they may have appeared. It is my earnest wish that new varieties be let alone by the amateur in horticulture, and that, instead of beginning with novelties in fruits, as is too often the case, he will postpone their trial until he has first tried those kinds that are known to be desirable.
